

T15 dual

SELECTORS

Maximum coin
recognition and
acceptance efficiency

The Jofemar T15 model is the most practical, reliable and secure in the market for coin recognition and acceptance. Fully developed by Jofemar, it incorporates state-of-the-art technology, such as double magnetic sensor, alloy and hardness sensors, and IR sensors that guarantee higher precision during the validation process.

The T15 Dual version is compatible with the Parallel and CCTalk standards (the most common ones in recreational and AWP machines) and it incorporates a practical solution to make the change without tools, only by activating or deactivating a micro-switch.

ACCESSORIES

- Coin sorter with five ways with or without coin entrance guidance channel.
- Front shield with recovery button and return cup.

FEATURES

- High-end selector, perfect for AWP recreational machines.
- Standard 3.5" format with rejection and acceptance in the lower part of the selector.
- Selection, with a micro-switch, of the operation protocol (Parallel or CCTalk).
- It has a double magnetic sensor in different stages to obtain all the alloy and magnetism data.
- Alloy and hardness sensors, and three IR sensors that analyse diameter guarantee greater recognition precision.
- It has two important fraud-prevention measures, as the anti-thread at the selector's entrance and the coin output IR detection.
- A computer can programme the chosen calibration, new coins, operation codes, etc.

ACCESSORIES

- Coin return in five tracks with or without coin guidance chann

| | T15 dual |
